

# Personal Blog on IBM Cloud Static web Apps

## Data processing of personal blog:

Many people start a personal blog because they have ideas they want to share. Personal blogs are a great way to connect with other people with common interests.

Common topics people like to write about:

- Personal or Inspirational Stories
- Food and Travel
- Areas of Expertise
- Passions and Interests
- Book or Movie Reviews
- Documentation of Life Events

Personal blog posts tend to have shorter and more frequent body paragraphs than your average essay. This can make your posts more digestible for your readers

1. **Travel blog:** Share experiences and tips from your travels.
2. **Food blog:** Document your cooking adventures, restaurant reviews, or unique recipes.
3. **Book review blog:** Share your thoughts on the books you read.
4. **Lifestyle blog:** Write about a variety of topics, including health, fashion, home decor, and more.
5. **Personal growth blog:** Document your journey towards personal development and self-improvement

- An attention-grabbing headline. A good blog post is about one topic, one story, one idea. ...
- A captivating lead paragraph. You know how much first impressions matter, right? ...
- Interesting supporting points. This is the body of the article. ...
- A compelling call-to-action.

# Employee Data Collection Best Practices

\*A personal blog is an online platform where individuals share their thoughts, experiences, interests, and hobbies. It serves as a personal diary or commentary in a digital format, often written in a conversational and informal tone. The following quote is from Andrew Sullivan, explaining why he blogs.

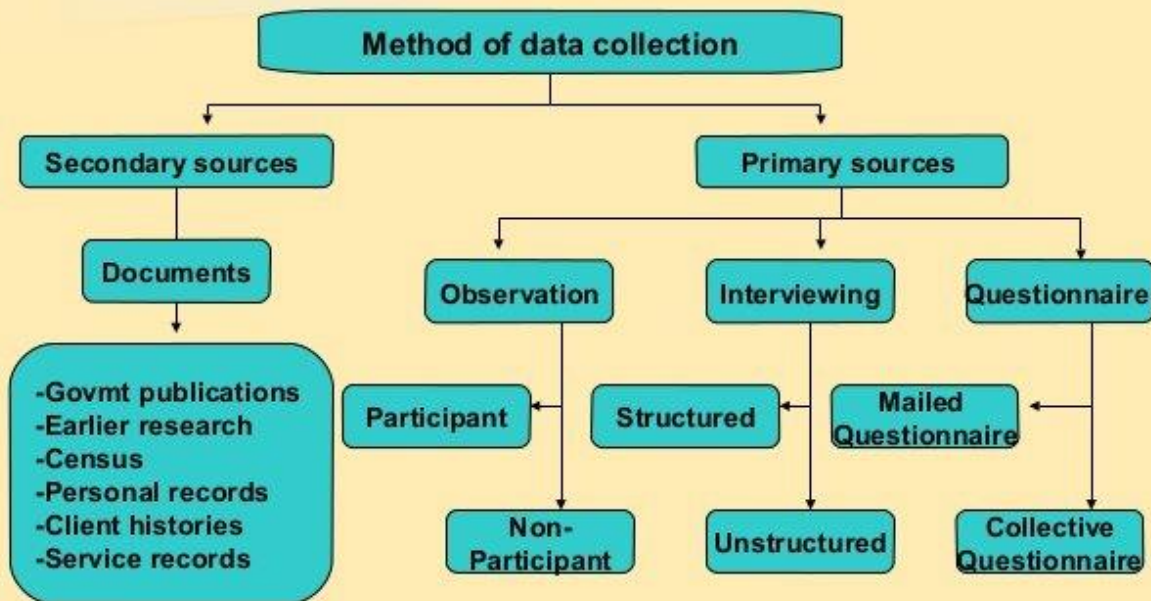

\*At the core of every successful personal blog is **original content**. This is why personal blogs are also vessels of quality writing. After all, you are the expert of telling your own story.

\*A personal blog is a virtual (online) platform where you write or journal your stories and that you maintain to educate the web readers. It's owned by a person rather a business or a company and focuses on personal experiences and opinions.

\*Most blogs are not reliable sources, however, you can prove it is a reliable source by evaluating it carefully. As with any source, be sure to check the author's credentials, evaluate the blog for bias, and check how often it is updated.

\*Blog formatting is the practice of making the best ideas the most obvious. This can be done by creating sections with distinct headers, modifying text elements, and splicing in pictures and media, all in an effort to draw the reader's attention toward what's most important.

# Method of data collection

A **blog** is usually written text but often includes pictures, videos, or other artwork to make it look more appealing.

A **personal blog** is your own online platform where you can share thoughts, opinions, and stories about yourself.

Personal blogs are different from other blogs because they are created and hosted by you, and cater to your own personal audience

- Personal or Inspirational Stories
- Food and Travel
- Areas of Expertise
- Passions and Interests
- Book or Movie Reviews
- Documentation of Life Events

Having code repositories is a great way to show your technical interviewer your skill but is often too in-depth for the recruiters doing the initial screening. An excellent way to get in some coding practice and showcase your coding is by creating a profile on some of the online coding challenge platforms.

Explaining pushes you to learn more about the topic which is good not only for your readers but for your own self as well. Starting a programming blog is very similar to teaching because in your blog you will be teaching the world about programming and computer science

It is difficult to accurately estimate how much you can earn from a programming blog as it depends on various factors such as the quality and popularity of your content, the advertising and sponsorship opportunities available, and the traffic your blog receives.

Programming skills, or coding skills, are the skills we use to write instructions for computers, applications, or software. They include different programming languages and concepts.

How do you write a coding article?

**Here are some tips that will help you win over the programming community:**

1. Article Title. The title of your article is very important. ...
2. Header Image / Thumbnail. The thumbnail of your article is typically the first image in your article. ...
3. Darkmode. ...
4. Using Medium's code blocks. ...
5. Using Screenshots. ...
6. Using GitHub Gists. ...
7. Inline Code.

**THANK YOU**
